**CONSTRUCTION COMMENCES ON ALMITA'S NEW  
FULLY AUTOMATED MANUFACTURING FACILITY**

The last of the screw piles are in the ground at the future home of Almita's new state of the art manufacturing facility off the QE2 highway near Ponoka. With his tongue firmly planted in his cheek, Larry Kaumeyer, company President stated; "We thought of going with concrete or driven piles, but screw piles were the logical choice for the new buildings foundation. Let's face it - screw piles are much more economical, and based on their custom engineering, speed of install, and environmental properties, it's the obvious choice". The new facility will feature both solar and wind power generation and will support Almita's goal of producing a green sustainable foundation.
